Manufacturing
Center**

Attachment 9:

Good Faith Hazardous Materials statement - Report to be provided when complete

Updated general information for issuance with the RFP:

According to historic records, the proposed Clark College at Boschma Farms Campus 10-acre site was used for agricultural operations including a dairy farm. Current use is grass seed propagation. There is no record of previous structures on the campus site. Clark College will engage an environmental testing consultant to sample the soils and will share the test results when available.
