Contractor will survey all road segments highlighted on the attached map and provide treatment recommendations to assist with the road decommissioning/abandonment of those roads. The contractor will survey the roadways, culverts, and stream characteristics by preparing a series of tables for all road segments in the Bessemer and CCC Road systems (see attached map). The survey will consist of walking each road segment with a string-line to develop stationing accurate to approximately 10 feet, obtaining GPS points for the beginning and end of each road, including a table summarizing all information obtained and providing a recommendation for action in a report format. DNR and Forest Service staff must review and approve table and report format prior to data collection by contractor. Recommendations for roads on DNR land must meet Forest Practices Act standards. DNR has data available for culvert locations, cross drains and stream crossings on DNR roads.
