1500 Jefferson Street SE
Olympia, WA 98501

Project No. 2021-829 Bellevue College On-Call Campus Architects

To the Selection Panel,

Miller Hayashi Architects appreciates the opportunity to present our qualifications for the Bellevue College On-Call Campus Architect roster. We are very interested in working with Bellevue College as a responsive consulting resource with strong planning skills, technical competence, and design creativity. We have worked with a wide range of public agencies that will confirm our responsiveness, creativity, and stewardship of public resources.

We are committed to forging long-term relationships. Our firm has recent experience providing On-Call capital planning and design services to public agencies including Lake Washington Institute of Technology, the State of Washington, the Washington State Public Health Laboratory, the City of Seattle, King County Library System, and The Seattle Public Library. We provide similar services to regional health care providers including NeighborCare, Healthpoint and Labcorp. We bring experience working with higher education institutions including Seattle University, Grays Harbor College, University of Washington, and Seattle Central College.

Our projects include tenant improvements, renovations, and new construction ranging from 2,000 to 125,000 sf. Many of our projects are undertaken with requirements for continuous occupancy and project phasing. We are familiar with the Bellevue College campus, with recent experience on the Building G and the Early Learning Center renovation currently under construction, and we are excited for the opportunity to continue to grow our relationship with the College.

Miller Hayashi is committed to the design of clearly organized, well detailed buildings. We enjoy the process of building consensus with our creative design work. Principals Brad Miller, Bruce Hayashi and Laura Maman provide direct involvement through all project phases. Our firm has the capacity and availability to assume responsibility for Bellevue College projects immediately. We welcome the opportunity to respond to further questions you may have.

Sincerely,

Bruce Hayashi, AIA, Principal, LEED Green Associate

Certification issued by the Washington State Office of Minority and Women's Business Enterprise (OMWBE)

- Minority Business Enterprise (MBE)
- Woman Business Enterprise (WBE)
- Minority Women Business Enterprise (MWBE)

Certification issued through the Washington State Department of Veteran's Affairs

- Veteran Owned Business

Certification issued through Washington Electronic Business Solution (WEBS)

- Small Business Enterprise (SBE)

Firm Profile

Miller Hayashi Architects was established in 1999 with the vision of architecture as an inclusive social art. We bring imagination to the design process as well as a grounding in the practicalities of project budget, constructability, and thorough documentation. We practice a hands-on approach of principal involvement in all phases of a project. We listen carefully to owners, building users and the community, and respond energetically with design proposals. Our firm is founded on our belief in the potential of architecture to enrich both function and site in an act of imagination.

Miller Hayashi Architects concentrates on the themes of learning, community and health in projects throughout the region. Recent clients include the Bellevue College, Lake Washington Institute of Technology, Seattle University, Seattle Public Library, King County Library System, City of Seattle, YMCA of Greater Seattle, Seattle Public Schools, and the University of Washington. Principals Brad Miller, Bruce Hayashi and Laura Maman provide leadership, experience and hands-on participation across a wide range of public and private project types. The firm's offices are located in Seattle's Fremont neighborhood. Projects are documented with Building Information Modeling (REVIT) software.

Miller Hayashi Architects stresses a collaborative, collegial environment, provides cross-training of staff among project types and emphasizes continuity through all phases of a project. Miller Hayashi fosters a diverse work environment.

100% Minority and Women Ownership
50% Women Employees
20% Minority Employees

We partner with WMBE firms on our projects and strive to expand our opportunities for collaboration with WMBE firms and Small Business Enterprises.

Miller Hayashi does not discriminate in employment on the basis of race, color, religion, sex, national origin, political affiliation, sexual orientation, marital status, disability, age or any other non-merit factor.

An overview of our firm can be found at www.millerhayashi.com.

Key Personnel

BRUCE NEIL HAYASHI, AIA, PRINCIPAL

Registered Architect: State of Washington, LEED GA

Master of Architecture and Certificate in Urban Design: University of Washington, 1984

B.A.: University of California at Santa Barbara, 1980

Affiliations: A4LE Washington Chapter, AIA, Wing Luke Asian Museum Board, Seattle Planning Commission, Seattle Landmarks Preservation Board, Seattle University Master Plan Advisory Committee

Bruce will be in Principle in charge for all Bellevue College projects. He is committed to working with educators, social services providers, and government agencies to define and implement physical improvements to their facilities. Bruce has developed extensive experience facilitating the participation of diverse community groups in the decision-making process. Mr. Hayashi's projects include educational facilities, administrative offices, counseling facilities, health care clinics, and neighborhood planning projects. The nature of these projects often demands creative solutions in the face of stringent budget requirements.

LAURA MAMAN, AIA, PRINCIPAL

Registered Architect: State of Washington, LEED AP BD+C

Master of Architecture: University of Washington, 2007

B.S. in Arch: University of Michigan, 2003

Affiliations: A4LE Washington Chapter, AIA, UW Professional Advisory Council, UW Integrated Design Lab Advisory Board, State of Washington BCA Certified Consultant

Laura has achieved recognition from her clients and team members as an exceptional project leader. Laura brings enthusiasm and competence to her role as Principal in the firm. Laura's expertise includes pre-design, programming, design, management of multi-disciplinary teams, and construction contract administration for projects ranging from \$10M to \$30M. Laura's recent project experience includes managing the \$19M, 125,000 sf Meany Middle School Reconfiguration and the \$29M Daniel Bagley Elementary Renovation & Addition. She has a specialized understanding of multi-use buildings and has worked to structure and facilitate an inclusive design process for actively engaged stakeholders.

Key Personnel

TYLER LASKOWSKI, AIA, ASSOCIATE

Registered Architect: State of Washington, LEED Green Associate
B.S Architectural Studies Washington State University 2011

Tyler has experience with managing projects with complicated requirements, he is excellent at programming and capable of quickly generating conceptual designs Tyler will be the day-to-day point of contact between the project team and the Owner team. Tyler leads design team members with a focus on innovative approaches to meet Owner needs. Tyler brings a depth of experience working on projects in the State of Washington. During the construction and close-out phases Tyler is committed to partnering with the construction team to foster effective communication and timely resolution of issues that arise in the field. Tyler is an Associate at Miller Hayashi, and has been a valued team member for over nine years.

JESSE CHAPMAN, AIA, PROJECT ARCHITECT

Registered Architect: State of Idaho
Master of Architecture: University of Washington, 2016; B.S in Arch: Portland State University, 2007

Through his four years with Miller Hayashi, Jesse has worked on many project types including new construction, remodels, and tenant improvements for a wide variety of public and commercial buildings requiring detailed coordination of complex building systems, lighting, and finishes. He brings expert knowledge of the Building Code, engineering systems, and contract documents. Jesse is able to handle complex projects that require phasing and detail knowledge of mechanical, plumbing, and electrical systems. Current projects include Lake Washington Institute of Technology (LWIT)

LWIT West Building HVAC Modernization
Seattle University Operations Center
Risdon Middle School Concrete Floor Repair
Vashon Island School District Bus Barn Study
Renton School District Renovations
Tally High School Renovation

LWIT East Building Bakery Entry Upgrades
LWIT East Building Science Classroom Renovation
Seattle Municipal Tower Chiller Plant Replacement
Vashon Island School District Maintenance Center
Vashon Island School District Gym Renovation
Neighborcare: Vashon Island High School Clinic

Project Approach

DESIGN PROCESS Our design approach is based on our commitment to listen carefully and respond thoughtfully to the input of project constituents. To structure the process we will work with your Project Manager to create a Design Milestones Schedule for each design process. This schedule links design phase tasks to stakeholder reviews and oversight approvals. The Milestones schedule will identify design team tasks, deliverables, and owner decision points necessary to achieve the proposed construction start date. The design process often includes public information workshops as well as presentations to fiscal oversight boards, design review boards and fundraising events. We create strong presentations that effectively communicate project requirements and design strategies to people outside of the project design process. Throughout the process we will work closely with you to hone the message that reflects your goals.

Miller Hayashi's architectural approach explores the creative use of natural light, the use of materials with engaging sensory qualities, and the consideration of architectural scale as it relates to a person's sense of comfort.

COMMUNICATION AND ENGAGING STAKEHOLDERS Miller Hayashi Architects brings proven success designing new buildings and renovations on campuses that fit the community and are well received. Our success lies in direct engagement with the stakeholders. We connect with the community through workshops or open-houses, and we respond with solutions that respect community values. Clients tell us that our record of engagement helps their projects build support and fosters cooperation with permitting agencies.

Miller Hayashi worked with King County Housing Authority and the Puget Sound Education Services District to plan the Educare Greenbridge Early Learning Center and integrate the program with the surrounding community redevelopment. Outreach in the community included fliers in multiple languages, open houses in the programming and design phases, participating in community events and active communication during construction.

Miller Hayashi recently lead the School Design Advisory Team composed of educators, neighbors and future parents for the Meany Middle School Renovation through a process of project definition, site visits to outstanding prototypes, educational specifications review, eco-charrette and conceptual design. Brad Miller also led the public design process for Seattle's Broadview Library, King County's Woodmont Library and Seattle's Fire Station 37.

HISTORIC STRUCTURES Miller Hayashi believes that the built environment represents a legacy for future generations. Both new and historic buildings shape our understanding of cultural values. When Landmarks Review is part of the process we recognize the importance of presenting the Owners' needs for flexibility and fiscal certainty within the framework of the review process. We have worked in historically significant structures such as UW Hall Health, the Garfield County Courthouse and the Georgetown City Hall building. We have guided projects through the review process of the Seattle Landmarks Preservation Board (LPB) and the State Department of Archaeology and Historic Preservation (DAHP).

Miller Hayashi stakeholder site visits, workshops and presentations: School Design Advisory Team for the Meany Middle School Reconfiguration.

Project Approach

RENOVATION IN OCCUPIED BUILDINGS On-Call projects in the institutional context often present specific challenges relative to multiple floor levels, adjacent building tenants, and continuous operation. Many of our projects require phasing of the work to maintain the Owner's ongoing operations and swing shift or night shifts to minimize impact to operations. We have several clients who operate facilities 24/7. This imposes constraints on construction and the identification of facilities for temporary relocations. Construction sites with limited staging area or difficult vehicle access impact the project schedule and budget. We plan projects and write clear specifications to define a mutually acceptable approach for the Owner and General Contractor working in continuously occupied facilities and constrained sites. These considerations typically include: Building & Personnel Security, Privacy, Sound Control, Odor, VOC & Dust Control, Temporary Utilities & Scheduling of Shutdowns, Night Work Hours, Contractor Access and Staging.

BUILDING EXPANSION Our approach to building expansion projects is to analyze the building with an eye to leveraging new investment to maximize the overall benefit to the owner. In our public library expansions at Broadview Library and Woodmont Library we removed structural barriers to create a seamless flow of services and collections and create cohesive architectural spaces. In our health care expansions we designed the improvements to solve existing problems of inappropriate zoning and inefficient circulation.

PERMITTING Miller Hayashi has a track record of successfully permitting a wide range of project types and has addressed a variety of zoning and land use issues for our clients. We have substantial building renovation and addition experience throughout the state and have worked with the City of Bellevue to identify and resolve issues related to fire protection, structural reinforcement, access, egress, and building envelope upgrades and to interpret the Washington State Energy Code and IBC as they apply to unique conditions. We've defined and resolved complicated campus and site development issues including:

- Design Review Boards / Design Commission Reviews
- Landmark Preservation Board Review
- Historic District Review
- SEPA declarations
- Rezoning & Subplats
- Administrative Conditional Use & Change of Use
- Traffic Impacts
- Development Standards Variance
- Environmentally Critical Areas and Shorelines

To accomplish this we work closely with land use planners, traffic consultants, environmental consultants, wetlands biologists, civil engineers and landscape architects to clearly define and address AHJ requirements and potential community concerns.

The Fairmount Park Elementary School Expansion required Landmarks Nomination, negotiation of Environmentally Critical Areas Steep Slope requirements and the addition of on-site bus loading. This was all accomplished on an expedited schedule.

Project Approach

SUSTAINABILITY AND OPERATIONS The integration of sustainable environmental design elements is a basic element of our architectural designs. Miller Hayashi's design approach is rooted in the appreciation of our Northwest environment and the desire to foster a thriving urban milieu within our region. The crucial test within our design philosophy is that a significant sustainable design decision should excel in terms of multiple criteria: programmatic, environmental, aesthetic and operational. While many of our projects have been cited for design excellence we are equally proud that the owners we work with tell us that our buildings are high performers in the everyday world of user appreciation and operational efficiency. A sustainable design move is only successful if it contributes to both these goals.

- Kent YMCA LEED v4 Silver
- ICHS Shoreline Clinic LEED Gold
- CHC Snohomish County Edmonds Clinic LEED Gold
- HealthPoint Midway Medical and Dental Center LEED Silver
- HealthPoint Bothell Medical and Dental Center LEED Gold
- Fire Station 37 LEED Gold
- SeaTac Community Health Center LEED TI
- Rainier Beach Community Health Center LEED Silver
- Grays Harbor College Childcare LEED Gold
- Greenbridge Early Learning Center LEED Gold

Carkeek Park Environmental Learning Center LEED Gold Our approach to systems selection includes Life Cycle Cost Analysis, Daylight Modeling, Building Envelope Modeling, Constructability Review and review with the Owner's facility operations staff. We have coordinated school projects with the Washington Sustainable Schools Protocol requirements for OSPI. Recent projects with LEED documentation and certification include:

Our commitment is to the long-term effectiveness and serviceability of the building. In recent projects we have implemented metering programs to develop a baseline for evaluation of the efficacy of sustainable strategies. We have prepared 'Owner's Manuals' tailored to building users to ensure that complex systems are clearly understood and effectively operated by building occupants and maintenance staff. Recent projects have incorporated diverse systems and technologies including:

- Displacement Ventilation
- Exhaust Air Heat Recovery
- Variable Refrigerant Flow Heat Pumps
- Ground Source Heat Pumps
- Steam to Hydronic Heat Conversions
- Radiant Slab
- Photovoltaic Panels and Net Metering
- Rainwater Purification and Re-use
- Green Roofs and Rain Gardens

We believe our buildings create environments for learning, through the use of materials and poetic spaces to inspire learning about our environment and inspire individuals to examine design, construction and their built environment.

*At the Grays Harbor College
Childcare Center beams
were recycled from a recently
demolished campus building.
The beams were re-cut at
Aberdeen's Historic Seaport, a
local non-profit institution.*

Project Approach

ALIGN PROJECT SCOPE, BUDGET, AND SCHEDULE Miller Hayashi will establish clear and realistic budget expectations at the beginning of the project and actively manage the design process to meet those expectations. To do this we will work with a Cost Analyst or General Contractor and our engineering subconsultants to develop a preliminary cost model that reflects site conditions, program requirements, site development costs, proposed building systems, code requirements and sustainability goals.

We will update the initial cost analysis with increasing detail at each stage of the design process to provide feedback to the project team. We work diligently to mitigate bid uncertainty and to provide the Owner with options through the use of estimating contingencies and additive bid alternates.

When project delivery includes General Contractor Preconstruction Services the Miller Hayashi design team works with our subconsultant team to verify pricing assumptions and allowances, and respond to proposed systems alternatives.

On our public projects we have participated in Value Analysis studies to create shared expectations for project costs and performance, and Constructability Reviews to confirm the validity of the design approach and verify that the documentation clearly communicates project requirements. In our negotiated and GCCM projects we have worked with the Contractor team that is providing preconstruction services to gauge the impact of project alternatives on the budget and schedule.

The Miller Hayashi design team will identify the construction schedule impacts of site development, project phasing, and building systems alternatives. We will clearly outline schedule constraints to be incorporated into the construction contract. During construction the Miller Hayashi team will communicate with the GC to track schedule sensitive activities and will work actively to expedite critical path RFI's and submittals.

QUALITY ASSURANCE Miller Hayashi employs several levels of document checking to ensure that bid documents are complete and coordinated. All projects employ Building Information Modeling (BIM) software to facilitate cross-referencing and subconsultant coordination. Projects incorporate in-house peer review of project assemblies and details by a project architect outside the project. We have rigorous office standards in terms of legibility and organization of contract documents to establish consistency and build our reference base from project to project. We maintain staff continuity through all phases of design and construction.

ICHS Shoreline:
Cross-Laminated Timber Construction

Miller Hayashi partners with the Owner and construction team to anticipate potential challenges to the project schedule.

Relevant Experience

BELLEVUE COLLEGE BUILDING G RENOVATION

Bellevue, WA 20,000 SF Renovation \$5M
2019

The Bellevue College Building G Renovation reconfigures existing space to provide new consolidated locker rooms, team rooms, classrooms, and fitness center to meet the evolving needs of the college's athletics programs, PE programs, and to serve the growing student community. Reconfigured spaces take advantage of natural light from existing skylights. New openings are cut into the existing structure to create a new, more efficient circulation pattern. The project provides new plumbing, electrical, lighting, fire sprinkler, and fire alarm systems, much of which is configured within the joist bays of the 1960's era precast concrete T structure minimizing visual impact in areas of exposed structure. Contract documents clearly outlined the College's requirements for occupancy of other portions of the building during construction.

LAKE WASHINGTON INSTITUTE OF TECHNOLOGY

Kirkland, WA \$250,000 - \$1.5M 2019-21

As the on-call architect, Miller Hayashi has supported a range of large and small renovation projects throughout the campus while working closely with the college and the State to meet challenging timelines and funding from multiple sources. For a building wide HVAC modernization project, the design and engineering team worked closely with the college to refine a grant proposal for additional air quality and energy efficiency improvements beyond the project baseline. Other projects included a remodel of the HR office suite with a focus on privacy and workflow, improvements to support science and vocational programs, and an alteration to increase the access and visibility of the bakery run by culinary arts students.

Relevant Experience

UNIVERSITY OF WASHINGTON HALL HEALTH CENTER REMODEL & ADDITION

Seattle, WA 57,000 SF \$5.2M 2011

The Hall Health Primary Care Center is located on Stevens Way in the center of the historic UW Upper Campus. The project includes a two-story addition, remodeling of approximately 30,000 sf, and extensive mechanical, electrical and fire alarm systems upgrades. Patient reception and waiting areas for eight clinical services were consolidated into a central Patient Services Center on the main level. This created a significantly improved customer experience and established a clear hierarchy of public and clinical spaces to meet contemporary medical privacy expectations. The two-story addition expands clinical areas and creates back-of-house circulation for healthcare providers. The project required close coordination to maintain ongoing clinic operations in all eight clinical departments during construction.

GRAYS HARBOR COLLEGE CHILDCARE CENTER

Aberdeen, WA 6,200 SF \$1.6M 2010

LEED GOLD

Developed in collaboration with Grays Harbor College staff, students and parent representatives, the design creates a welcoming environment for children, from infants through 6th grade. The Center establishes a strong visual connection to the main campus. Project funding from the State of Washington and from Federal Community Development Block Grants administered by Grays Harbor County necessitated coordination of duplicative and at times conflicting standards. The design of the LEED Gold building occurred in a fast-track process tied to funding deadlines; the project bid within six months of notice to proceed with design. The Center's structural system used beams reclaimed from a demolished campus building. The beams were resawn and finished by Historic Seaport, a local non-profit organization. Natural ventilation, radiant slab heating, heat recovery and native landscaping are among the sustainable strategies incorporated into the design.

Relevant Experience

SEATTLE MUNICIPAL TOWER: COOLING SYSTEM IMPROVEMENTS

Seattle, WA 990,000 SF \$14-16M 2016-21

The Chiller Plant and Condenser Replacement projects are an essential part of the City's capital maintenance and energy efficiency goals. Working closely with the City, CBRE, and sub-consultant team, we started our design effort by evaluating the building to identify efficient strategies to reduce and stabilize the load. A series of upgrades and replacements to the 30-year old air handling, cooling, and building management controls systems have been implemented with minimal interference to the 5,000+ occupants. These improvements will reduce overall energy usage through higher performance equipment and improved building programming to take advantage of nighttime air flushing and demand load delivery. A key part of the strategy was to replace the interior cooling towers with more efficient units on top of the 6th Ave parking garage. Highly visible from I-5 and the surrounding buildings, a custom perforated screen and frame system was developed to integrate the equipment at a scale appropriate to the building. An abstracted pattern of varying hole sizes was designed to create a subtle image of waves, representative of the both the nearby waterfront and the evaporative cooling process of the towers behind.

CLOVER PARK TECHNICAL COLLEGE BLDG 19 RE-CLAD, RE-ROOF & HVAC Lakewood, WA State of Washington GA 19,000 SF Envelope Upgrade 2,750 SF Re-roof & HVAC Replacement 2011

Miller Hayashi coordinated a building envelope assessment for the EIFS clad 1981 structure, analyzed envelope upgrade alternatives, and designed the re-cladding system. Originally to be a JOC project, substantial savings resulted from combining the project with an HVAC replacement/re-roof and putting it to bid. The project included design of a metal panel re-cladding system over the existing facades, replacement of 50% of the rooftop Air Handling Units, and re-roofing of the 2,750 sf of building mechanical well. All work was accomplished with continued occupancy of the building by the College and Chamber of Commerce Business Outreach program.

Relevant Experience

RAINIER VALLEY LEADERSHIP ACADEMY

Seattle, WA 46,000 SF \$9M 2018

The Rainier Valley Leadership Academy re-developed a site on Rainier Avenue South for a new middle school serving the local community. Miller Hayashi lead the design of the new 3-story school building and site improvements including outdoor play courts, bus loading, parent drop off, parking, stormwater infrastructure, and new site utilities. Miller Hayashi coordinated with the selected General Contractor during the pre-construction services phase to focus on ongoing value analysis. The design process included the City of Seattle's community review process for public schools and community outreach presentations.

MEANY MIDDLE SCHOOL RECONFIGURATION

Seattle Public Schools Seattle, WA 119,545 SF Renovation \$17.6 M 2017

This project was transformational: a middle school made up of structures built in 1941, 1954 and 1961 that over the years had been re-purposed for Alternative High School and International School programs was returned to service as a community-based Middle School. The building has been reconfigured to accommodate new programs and teaching technology and to improve flow and supervision. Most importantly the school has been given an identity and a social heart. The modifications and additions created student breakout spaces and re-envisioned the enclosed cafeteria as a bright, day-lighted student commons that connects rather than separates. In addition the project implemented a new energy efficient building envelope, life safety and accessibility upgrades, and new mechanical and electrical infrastructure.

Relevant Experience

DANIEL BAGLEY SCHOOL RENOVATION AND ADDITION

Seattle Public Schools Seattle, WA 18,200 SF New / 40,690 SF Renovation \$27 M 2020

The Daniel Bagley Elementary School in Seattle's Green Lake neighborhood is a historic landmark structure designed by Floyd Naramore, opening in 1930. Miller Hayashi is designing the renovation of the historic structure and additions to increase capacity and help meet the districts needs. The project will implement new energy efficient building systems, life safety improvements, accessibility upgrades, and building envelope rehabilitation. The building interior will be reorganized to accommodate new programs and teaching technology and to improve school safety and supervision. The additions will provide 8 new classrooms in a 'learning community' model, and a new gym. This will allow the existing gym to be reconfigure for art and music programs. The school will close for one year and re-open in 2020, anchoring this neighborhood of the city.

WEST SEATTLE FAMILY YMCA

Seattle, WA 7,000 SF Addition/34,000 SF Renovation \$8.8M 2017

The previous West Seattle Y was constructed on a full city block in 1984. In the ensuing years the West Seattle Triangle area grew up around the Y, and the organization expanded operations into leased space in surrounding buildings. This project expanded the Y to consolidate operations into a single, efficiently staffed facility. The expansion provides 7,000 square feet of new space including a community meeting room, a healthy eating demonstration kitchen, reception lobby, and entry court. The northwest corner is remodeled into a Family Wing providing age-related recreation and family support programs for infants and children.

Relevant Experience

Seattle University

SEATTLE UNIVERSITY PUBLIC SAFETY AND EMERGENCY OPERATIONS CENTER

Seattle, WA 10,000 SF \$3.5M 2019

Seattle University relocated its Public Safety Department and Emergency Operations Center to the basement level of the Landmarked Columbia Building. Completed in two phases while the building was occupied, the build-out provides office and support space for 25 employees. The budget and schedule challenges to this project were coupled with the need for a high-performance, technology-centered space. The palette was warm, modern, and carried natural materials throughout.

Seattle Central College

SEATTLE CENTRAL COMMUNITY COLLEGE APPAREL REMODEL

State of Washington, 19,000 sf re-clad, 2,750 sf re-roof, \$350,000 2011

This fast track project involved building assessment, budgeting, and the review of design alternatives with program faculty for tenant improvements to create departmental offices, new partitions, mechanical upgrades and refurbishing of the Apparel Design Studio spaces. The construction work was completed while the building was occupied, and other construction projects were under way. These activities required close coordination with the building owner and with other general contractors on site. Construction was procured through a Job Order Contract (JOC) to expedite the project schedule.

Seattle Central College Re-Roof

SEATTLE CENTRAL COMMUNITY COLLEGE BROADWAY EDISON RE-ROOF

Seattle Central Community College, 30,000 sf, \$1,000,000, 2011

Seattle University relocated its Emergency Operations Center to the basement level of the Landmarked Columbia Building. Completed in two phases while the building was occupied, the build-out provides office and support space for 25 employees. The budget and schedule challenges to this project were coupled with the need for a high-performance, technology-centered space. The palette was warm, modern, and carried natural materials throughout.

WA State Public Health Lab

WASHINGTON STATE PUBLIC HEALTH LABORATORY

State of Washington GA, \$700,000, 2007-2017

Past projects include replacement of the 20 year old membrane roof and the upgrading of roof access and worker safety measures for the 50,000 sf facility were coordinated with ongoing lab operations. Miller Hayashi worked with WSPHL and State of Washington GA staff to develop performance criteria and to assess roof replacement systems.

Capitol Campus Governor's Mansion

STATE OF WASHINGTON GOVERNOR'S MANSION

State of Washington GA, \$400,000, 2018

Miller Hayashi worked with EAS and Capitol Campus staff to assess, budget, and implement improvements to the historic Governor's Mansion. The roof was replaced and a more permanent solution was found to the replacement of the decayed wood balustrades. These had been replaced numerous times over the years and no longer reflected the original design. Miller Hayashi researched and worked with specialty fabricators to install aluminum balustrades constructed to the details of the original drawings. The residence was occupied during much of the project and the work was scheduled and coordinated to minimize construction impacts.

Relevant Experience

EPSTEIN OPPORTUNITY CENTER RENOVATION AND ADDITION

Seattle, WA 15,700 SF \$4.5M, 2014

The Epstein Opportunity Center is a multi-use community center constructed within the decommissioned Yesler Terrace Steam Plant, a Seattle Landmark industrial building. As it stood the building was a concrete shell used for storage, with no heating, insulation, stairwells or restrooms. Miller Hayashi supported grant applications and Landmarks Board approval for the adaptive reuse of the structure. Miller Hayashi coordinated forensic investigations to evaluate the historic structure and designed the renovation and addition to integrate the diverse program into the existing concrete shell. The Center provides Head Start classrooms and rooftop children's outdoor play area operated by Neighborhood House, Job Connection Program, Youth Services and public meeting rooms.

KENT EAST HILL YMCA

Kent, WA 51,000 SF \$19M 2019

The Kent YMCA is a new 51,000 sf community and recreational facility being constructed in partnership with the City of Kent. The Y is the focal point of a redeveloped site that joins two smaller parks, provides parking, and enhances recreational activities for a fast growing area of the City. The new Y includes community meeting rooms and gathering spaces, a demonstration kitchen for healthy eating programs and family support spaces for infants and children. Recreational facilities include two recreational pools and a spa/therapy pool, two basketball courts and fitness studios. The design stitches the building into the overall site development plan to take advantage of opportunities for interaction between indoor and outdoor activities. Informal gathering spaces open through large sliders to a plaza, the 'front porch' for the community. The plaza contains fixed and movable seating, game tables and atmospheric lighting to create flexibility for informal use and scheduled events. The project is designed to meet the new LEED 4 Silver Certification requirements.

Relevant Experience

FAIRMOUNT PARK ELEMENTARY SCHOOL EXPANSION

Seattle, WA 20,000 SF Addition/40,000 SF Renovation \$12M 2014

The Fairmount Park School had been shuttered for over five years when burgeoning enrollment necessitated reopening and expansion on an extremely challenging site. Miller Hayashi's site design managed this by locating the two-story 20,000 sf classroom wing along the wooded hillside. Through the close collaboration of the geotechnical engineer, civil engineer and structural engineer the design carefully fit the addition between an existing rockery and the older classroom wing. Doing so built upon the circulation pattern and the courtyard scheme of the original school. The new wing takes advantage of views into the hillside trees. Comprehensive renovation of the 1964 building included new teaching technology, HVAC systems, seismic, access and envelope upgrades.

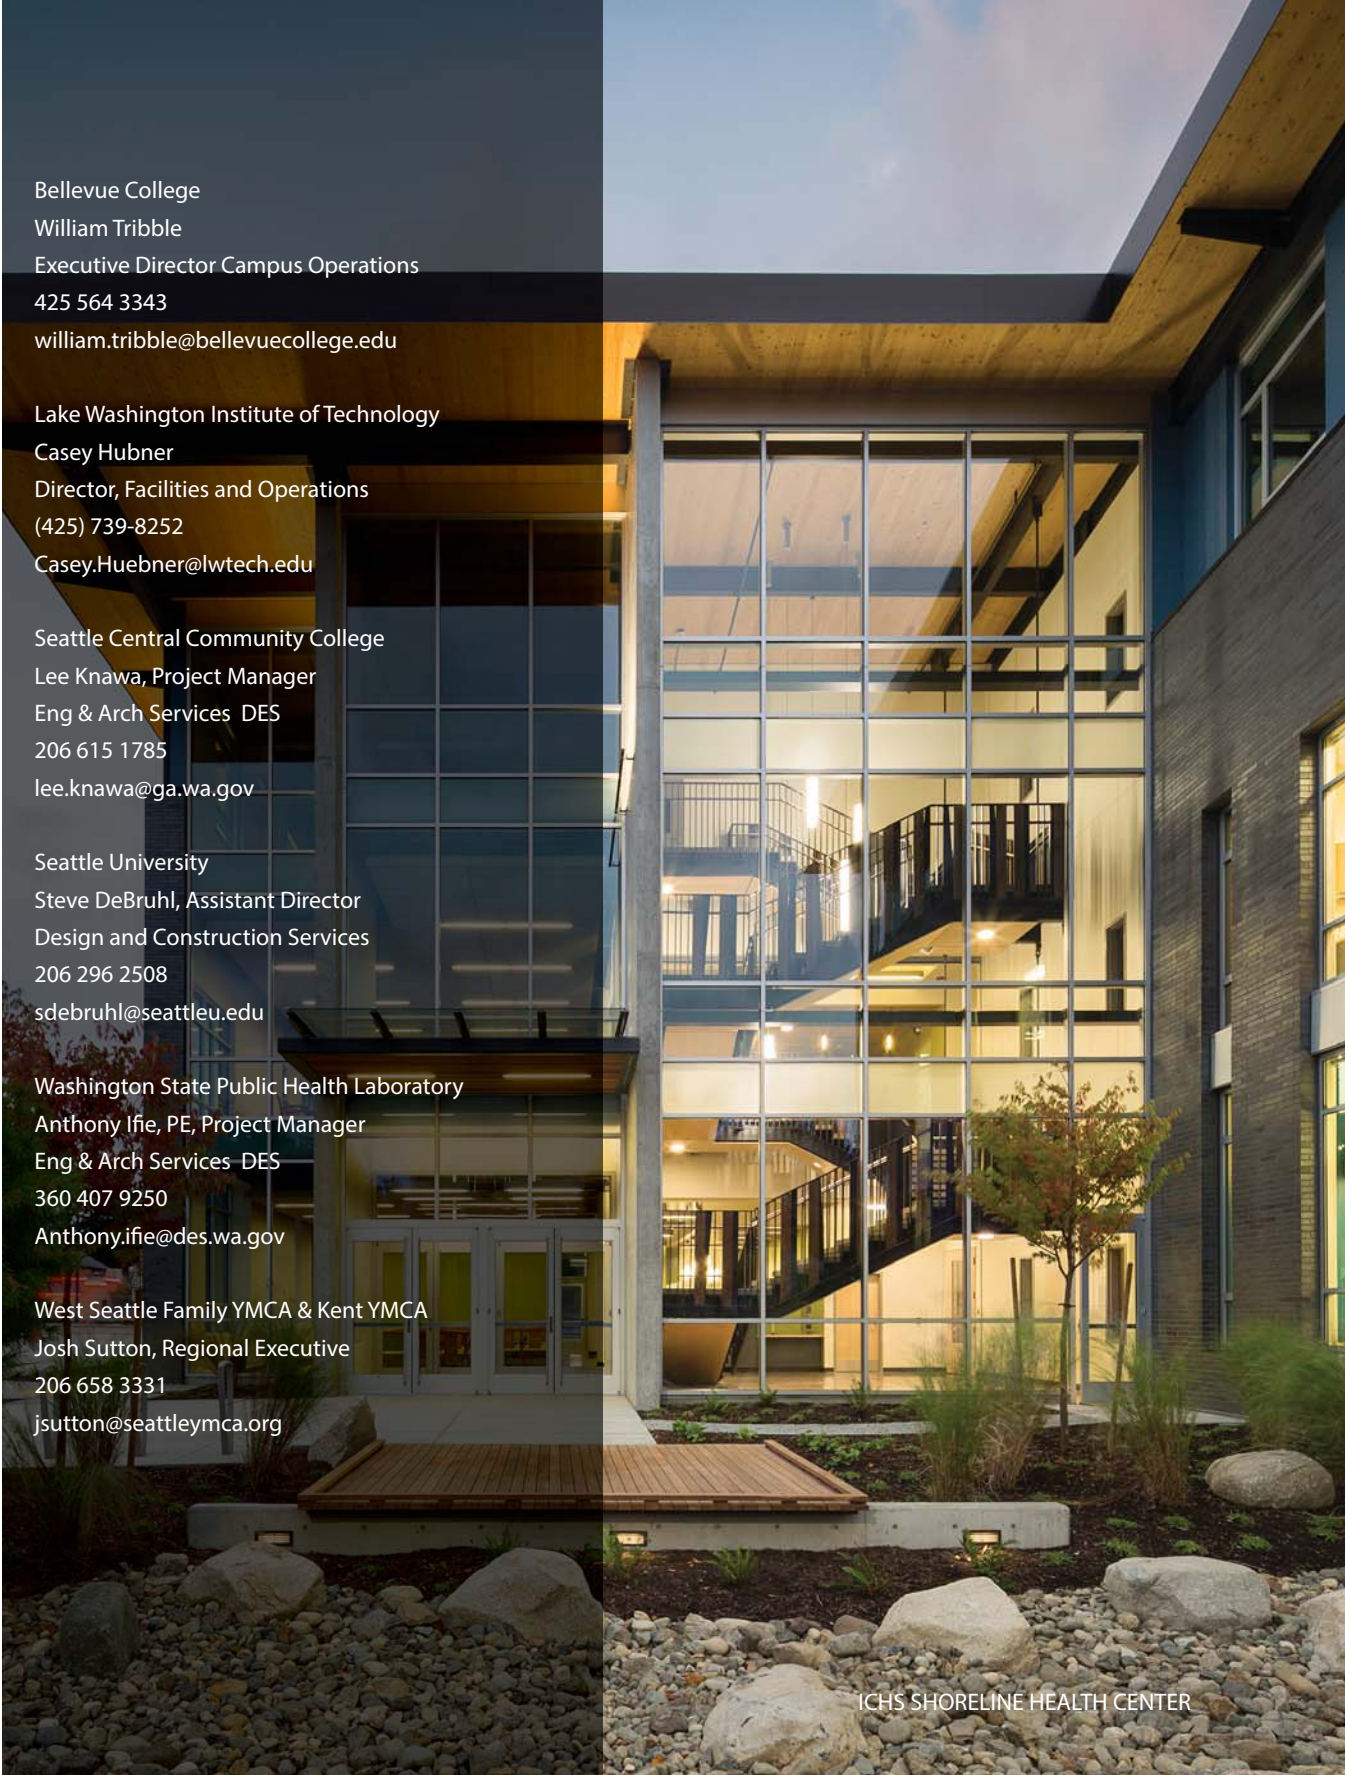

LUMMI NATION EARLY LEARNING PROGRAMS

Bellingham, WA 20,000 SF \$5.4M 2013

The Lummi Nation Early Learning Programs Center provides a new building for a program that has been in operation for over 30 years. The building organizes eight Head Start classrooms and four Licensed Child Care classrooms around an outdoor play area nestled along the boundary of a wooded wetland. The building is laid out in an 'L' to recall a longhouse structure unique to the Lummi. The building design was coordinated with the master plan of the new tribal administration campus. This included our design of the vehicular and pedestrian access scheme, coordination of surface water management with shared detention ponds, and optimization of power, water and broadband utilities layouts. A geothermal well-field is shared with nearby buildings to provide energy efficient heating and cooling.

Diversity Inclusion Plan

MILLER HAYASHI ARCHITECTS SMALL M/WBE OUTREACH PLAN

Miller Hayashi Architects is committed to fostering business practices that promote a diverse and inclusive community, work force and professional culture. The plan administrator is Bruce Hayashi, Principal, Miller Hayashi Architects. The plan administrator will be assisted by staff as necessary to fulfill Plan-related tasks. The role of the plan administrator is to lead and monitor the implementation and the documentation of Outreach Plan efforts.

SMALL M/WBE OUTREACH PLAN GOAL: Women-Owned businesses (Small M/WBE) listed in the certified directory of the State of Washington Office of Minority and Women's Business Enterprises (OMWBE) on our project teams. A specific goal of including 10% Certified MBE and 6% Certified WBE participation on individual project teams is stated. Miller Hayashi Architects acknowledges that the stated goal is a long term objective and the firm's short term objective is to achieve incremental improvement in its utilization of MBE and WBE firms.

PLAN ADMINISTRATOR: 4. OUTREACH PLAN COMPONENTS: Create and update a database of State Certified Small M/WBE firms in consulting disciplines relevant to the provision of Miller Hayashi's professional services. Attend Small M/WBE job fairs, pre-proposal and outreach meetings for consultants when scheduled by public agencies. Advertise in general circulation, trade association and or Small M/WBE-focused media concerning design consulting opportunities. Solicit Small M/WBE firm contacts on the Miller Hayashi website. Provide notice to Small M/WBE firms of Miller Hayashi's interest in soliciting qualifications and proposals for subconsultant services. Follow up with Small M/WBE firms periodically to determine their interest in providing subconsultant services to Miller Hayashi. Identify specific sub-consultancies where Small M/WBE participation will help meet the stated goal of the plan. These may include but not be limited to Structural Engineering, Mechanical Engineering, Electrical Engineering, Communications Systems Design, Civil Engineering, Landscape Architecture, Interior Design, Cost Estimating, Acoustical Engineering, Lighting Design, Sustainability Consulting, Master Planning and Programming. Provide information to interested Small M/WBE firms about the requirements of specific project opportunities. Assess in good faith the capabilities and qualifications of interested Small M/WBE firms for specific projects, not rejecting firms as unqualified without sound reasons relative to project requirements. Such assessments may include documentation of the firms' statement of insurance coverage meeting requirements specified by the Owner Architect Agreement. Negotiate scope and fee in good faith with Small M/WBE firms whose capabilities and qualifications are felt to match project requirements; including reasonable quotes competitive with those of other qualified sub consultants.

MENTORING STRATEGIES AND APPROACHES: Provide insurance brokerage contacts to Small M/WBE firms lacking required insurance but otherwise deemed qualified and capable. Assist Small M/WBE firms deemed qualified and capable with arrangements to help them gain access to equipment, supplies or services necessary for them to provide services to Miller Hayashi. Assist Small M/WBE firms deemed qualified and capable to participate in new project types and to build professional relationships with other design team members.

IN-HOUSE EDUCATION: Conduct educational meetings on an annual basis for Miller Hayashi staff with the purpose to familiarize staff with the Miller Hayashi Outreach Plan and with the specific plan components to utilize and reach out to Small M/WBE subconsultants. Encourage staff to develop professional relationships and promote opportunities to team with Small M/WBE subconsultants. Involve staff in Small M/WBE outreach, assessment and mentoring activities.

SUBCONSULTANT DISPUTE RESOLUTION: Dispute resolution with Small M/WBE subconsultants will conform to the dispute resolution processes described in the completed AIA Document C401-2007 Standard Form of Agreement Between Architect and Consultant for each specific project.

SUBCONSULTANT PAYMENT PROVISIONS: Payment of Small M/WBE subconsultants will conform to the Compensation and Payments to the Consultant provisions described in the completed AIA Document C401-2007 Standard Form of Agreement Between Architect and Consultant for each specific project.

SMALL M/WBE UTILIZATION REPORTS: Where required by the terms of the Prime Agreement for a specific project Miller Hayashi will prepare and submit M/WBE utilization reports documenting the names of Certified Small M/WBE subconsultants, taxpayer ID #, total project commitment, payment due for current period, and total payments to date for all Small M/WBE consultants. The reports will be submitted with each monthly invoice or as otherwise requested by the Owner.

OUTREACH PLAN MONITORING AND ANNUAL DOCUMENTATION: The Outreach Plan will be monitored monthly by the Plan Administrator and documented annually. Annual Documentation will be compiled into an Annual Report issued in February for the preceding calendar year. The Annual Report will include Updated List of Small M/WBE firms Certified by the State of Washington in related consultant disciplines, List of Small M/WBE pre-proposal and outreach meetings attended, List of Small M/WBE Advertisement efforts, Summary of Small M/WBE firm scope and fee negotiation activity, List of Mentoring and Mentoring Activities provided to Small M/WBE Subconsultants, In-House Small M/WBE Education meetings, Small M/WBE Utilization Summaries for all completed projects, updated annual summary of Miller Hayashi Small M/WBE Utilization
