EXECUTIVE SUMMARY AND RECOMMENDATIONS

The Building Energy Benchmarking Law (RCW 19.27A.190) requires agencies, colleges and universities to track building energy use and make their buildings more energy efficient. This biennial report is required to summarize the statewide portfolio manager master account reporting data.

Background

The EPA's Energy Star Portfolio Manager is an interactive energy management tool that allows tracking and assessment of energy consumption across an entire portfolio of buildings in a secure online environment. It can be used to identify under-performing buildings, set capital improvement priorities, verify efficiency improvements, and identify successful energy management practices in state facilities.

Challenges to successful building energy benchmarking can vary. If energy use data is not entered into the Portfolio Manager tool, reporting will be incomplete. Many agency and college campuses that are served by campus steam loops are not metered at the building level, so building energy use data is missing. Agencies have limited resources to apply to metering and building energy benchmarking which also leads to incomplete data.

Key findings

The 2009 law went into effect when the state was making staff and capital funding reductions. Those constraints hindered agencies, colleges, and universities from meeting the statute timelines. While funding has limited the implementation of the law, agencies, colleges, and universities have made substantial progress.

The greatest barrier to state-owned facilities complying with the law is a lack of meters on individual buildings. It is impossible to effectively manage the energy use of large buildings that are not separately metered. State agencies, colleges, and universities should be properly resourced so that tracking and reducing energy becomes a higher priority.

Recommendations

Incorporate building energy benchmarking into funding requirements – Agencies, colleges, and universities are not complying fully with the benchmarking law. Because of this, we do not know whether agency, college, and university building energy use is trending toward our greenhouse gas goals. Consider requiring current building benchmarking data in Portfolio Manager as a condition of capital funding.

Portfolio Manager Benchmarking Report

October 2016 through September 2018

Install energy meters on state buildings – Millions of square feet of state agency and college buildings are not separately metered. It's impossible to benchmark and track the energy use of a building that is not metered.

Expand the Resource Conservation Management (RCM) program – The RCM program helps facility managers reduce energy bills and make more cost effective maintenance and capital investment decisions. Provide funding to expand the RCM program to serve more agencies, colleges, and school districts. Consider funding a specialized RCM position to provide building energy benchmarking assistance.

Ensure adequate staffing of facilities maintenance and operations – Facilities maintenance and operations must be adequately staffed and trained to keep occupancy schedules up to date, observe trends, troubleshoot problems, and adjust building systems to reduce energy use.

Fund Zero Energy Buildings and Zero Energy Renovations – Currently, new buildings and renovation projects are adding to the greenhouse gas emissions of agencies and colleges. New buildings that are capable of using less energy than they make should be prioritized. Renovations that dramatically reduce building energy use should also be considered and funded.

Build a modern work environment, to reduce greenhouse gas emissions – When possible, right-size facilities and reduce commutes by using strategies such as shared spaces, hoteling, distance learning, flexible work hours, and cloud computing as described in Executive Order 16-07 and on the OFM Modern Workplaces website.

Create a culture of conservation and sustainability –

- In many cases, energy conservation measures are not implemented, even though financial analysis shows that the energy savings can pay for the energy conservation measures over time.
- Decision makers consider cost effective energy retrofit proposals to be riskier than higher future operating costs.
- Higher future greenhouse gas emissions are not always considered.
- Facilities investments which produce long-term financial benefits or reduce organizational greenhouse gas emissions do not receive sufficient recognition.
- Major operational and facilities decisions are not driven by greenhouse gas reduction goals.

There are also thousands of energy-related decisions made every day by building occupants and agency staff. Possible no-cost or low-cost energy saving opportunities originate in these day-to-day decisions. Management support for energy savings efforts is essential. A culture of conservation and sustainability helps everyone find the best way to complete their mission while still striving for their energy reduction goals. Empowering everyone to make decisions that reduce energy use and greenhouse gas emissions is consistent with Lean principles.

Portfolio Manager Benchmarking Report

October 2016 through September 2018

Establish a cycle of continuous improvement – Completing all cost effective energy conservation measures is ongoing. As soon as five years after a comprehensive building energy retrofit is done, a new energy audit is likely to find additional cost effective energy saving measures. Changes in operations, degradation of equipment, new ideas and strategies, and new technology constantly create opportunities for reducing energy use. When state government has a focus on continuously implementing all cost effective energy conservation measures, we save money and reduce greenhouse gas emissions.

OVERVIEW

RCW 19.27A.190 Energy Benchmarking

Under state law (RCW 19.27A.190), “benchmarking” is a tool for finding energy savings in state buildings. Buildings that have high-energy consumption must go through a process of energy audits. If the audit identifies a cost-effective upgrade, the agency is directed to implement it, subject to available funding.

What Is Building Energy Benchmarking?

Building Energy Benchmarking¹ is recording a building’s energy use over the course of a year. This establishes a baseline that can be used to compare against similar buildings or against itself over time. Energy Use Intensity (EUI), is the unit used in benchmarking. The EUI is the total energy used in one year divided by the gross square footage of the building (kBtu/sqft). Buildings that use electricity, natural gas, propane, wood, or steam, can all be compared using this common unit of measurement. Buildings with a higher EUI use more energy per square foot than buildings with a lower EUI.

The EPA Energy Star Portfolio Manager also provides scores for some building types, including offices, warehouses, dormitories, and K-12 schools. The Energy Star score can be used to compare a building to other similar buildings. Buildings scoring in the 75th percentile or better can receive Energy Star certification.

A building doesn’t need to get a score to be benchmarked. Building energy performance may also be benchmarked by recording a building’s energy use for one year and using that as a baseline for comparison with future years.

Benchmarking and monitoring building energy use

Studies have shown that metering, recording and monitoring the energy use of a building can reduce its overall energy use. Metering data can be used to:

- Identify under-performing buildings.
- Set capital improvement priorities.
- Verify efficiency improvements.
- Identify successful energy management practices.

¹ RCW 19.27A.140 defines “benchmark” as, “the energy used by a facility as recorded monthly for at least one year and the facility characteristics information inputs required for a portfolio manager.”

Portfolio Manager Benchmarking Report

October 2016 through September 2018

Why Use the EPA Portfolio Manager?

The EPA Portfolio Manager² computer program is free, web-based, and includes free data storage, technical support and training. It also allows statewide tracking and review of building energy use in a secure online environment. It can be used to track changes in energy and water use over time in single buildings, groups of buildings, or an entire list of buildings. Portfolio Manager offers a uniform way to disclose building energy performance.

Technical Support by Department of Enterprise Services (DES)

In 2009, DES³ created a master account in the EPA Portfolio Manager for state of Washington agencies, colleges and universities. DES provides access to training, technical assistance, and a website containing resources and links. A copy of the DES Portfolio Manager Webpage is provided in Appendix B.

Four Steps Required by Energy Benchmarking Law

There are four steps required by the Energy Benchmarking Law:

Step 1: Benchmarking Building Energy Use

The Benchmarking Law makes agencies, colleges and universities responsible for developing energy benchmarks for their facilities using Portfolio Manager. The benchmarking reports are shared using a master account managed by DES. Benchmarking was required to be complete by 2010 if funding was provided. Even though funding was not provided, some agencies, colleges and universities did benchmark.

Step 2: Preliminary Energy Audits

Benchmarking results are used to identify buildings that will benefit from a preliminary energy audit. For buildings with Portfolio Manager Energy Star scores, a score of less than 50 triggers requirements for a preliminary audit. For all other buildings or campuses, DES has used the reported EUI to make recommendations for preliminary audits. (See the DES Evaluation of Non-Rated Building Types in Appendix C.)

Under the DES Energy Savings Performance Contracting (ESPC) program (Appendix D), a preliminary audit is a simple review of existing buildings that finds potential energy saving measures. The preliminary audit walkthrough includes the facility manager, staff from an Energy Services Company (ESCO) firm, and a DES energy engineer. It may take a day or less to complete a preliminary audit walkthrough at a single building or small campus.

² A building energy tracking tool developed by the U.S. Environmental Protection Agency

³ General Administration is now a part of the Department of Enterprise Services (DES)

Portfolio Manager Benchmarking Report

October 2016 through September 2018

Step 3: Investment Grade Audits

An investment grade audit is an engineering study. If the preliminary audit identified energy saving measures, the agencies, colleges or universities were required to complete an investment grade audit by July 1, 2013.

Step 4: Building Energy Retrofits

Building energy retrofits implement the energy saving measures identified in the investment grade audit. Agencies, colleges or universities were required to install cost effective measures identified during the investment grade audits by July 1, 2016, subject to available funding

BUILDING ENERGY BENCHMARKING

Executive Agency Buildings

In 2017, the Office of Financial Management (OFM) Facilities Inventory showed that executive agencies owned about 26.1 million square feet of buildings. About 80 percent of building square footage owned by Executive Agencies is on campuses with shared utilities. Most of these campus buildings are not separately metered. Agencies were encouraged to benchmark at the building level if meters were available for each building.

In 2017, the OFM Facilities Inventory shows that executive agency leases total about 8.7 million square feet.

Benchmarking is required for campuses, large buildings (over 10,000 square feet) and leased buildings for which the lessee pays the utilities directly (RCW 19.27A.140(20)). Of the 26.8 million square feet required to be benchmarked, about 55 percent was benchmarked and current in Portfolio Manager in both 2014 and 2015. In 2017, there were fewer agency buildings and campuses current in Portfolio Manager than in 2015.

Other Agency Owned Buildings

Non-executive agencies own about 7.2 million square feet of buildings. These buildings represent about 7 percent of state building square footage. Many of these buildings are located on small, remote compounds or in parks. Building energy benchmarking by these agencies is not evaluated in this report.

Non-executive agencies lease about 1.7 million square feet of buildings. These buildings represent about 2 percent of state building square footage. Building energy benchmarking by these agencies is not evaluated in this report.

College Buildings

In 2017, the OFM Facilities Inventory showed that colleges owned buildings totaling about 20.7 million square feet. Most college buildings share utilities with other buildings on a campus. About 90 percent of building square footage owned by colleges is on campuses with shared utilities. Most of these campus buildings are not separately metered. Colleges were encouraged to benchmark at the building level if meters were available.

In 2017, the OFM Facilities Inventory shows that college leases total about 1 million square feet.

Benchmarking is required for campuses, large buildings and leased buildings for which the lessee pays the utilities directly. Of over 20 million square feet required to be benchmarked, about 30 percent was benchmarked and current in Portfolio Manager in both 2014 and 2015. In 2017, there were fewer college buildings and campuses current in Portfolio Manager than in 2015.

Portfolio Manager Benchmarking Report

October 2016 through September 2018

University Buildings

In 2017, the OFM Facilities Inventory showed that universities owned about 51.2 million square feet of buildings. Most university buildings share utilities with other buildings on a campus. About 90 percent of building square footage owned by universities is on campuses with shared utilities. Most of these campus buildings are not separately metered.

Benchmarking is required for campuses, large buildings, and leased buildings for which the lessee pays the utilities directly. Of about 48 million square feet required to be benchmarked, about 17 percent was benchmarked and current in Portfolio Manager in both 2014 and 2015. In 2017, there were fewer university buildings and campuses current in Portfolio Manager than in 2015.

Figure 1 - Agency, College and University Facilities (square feet).

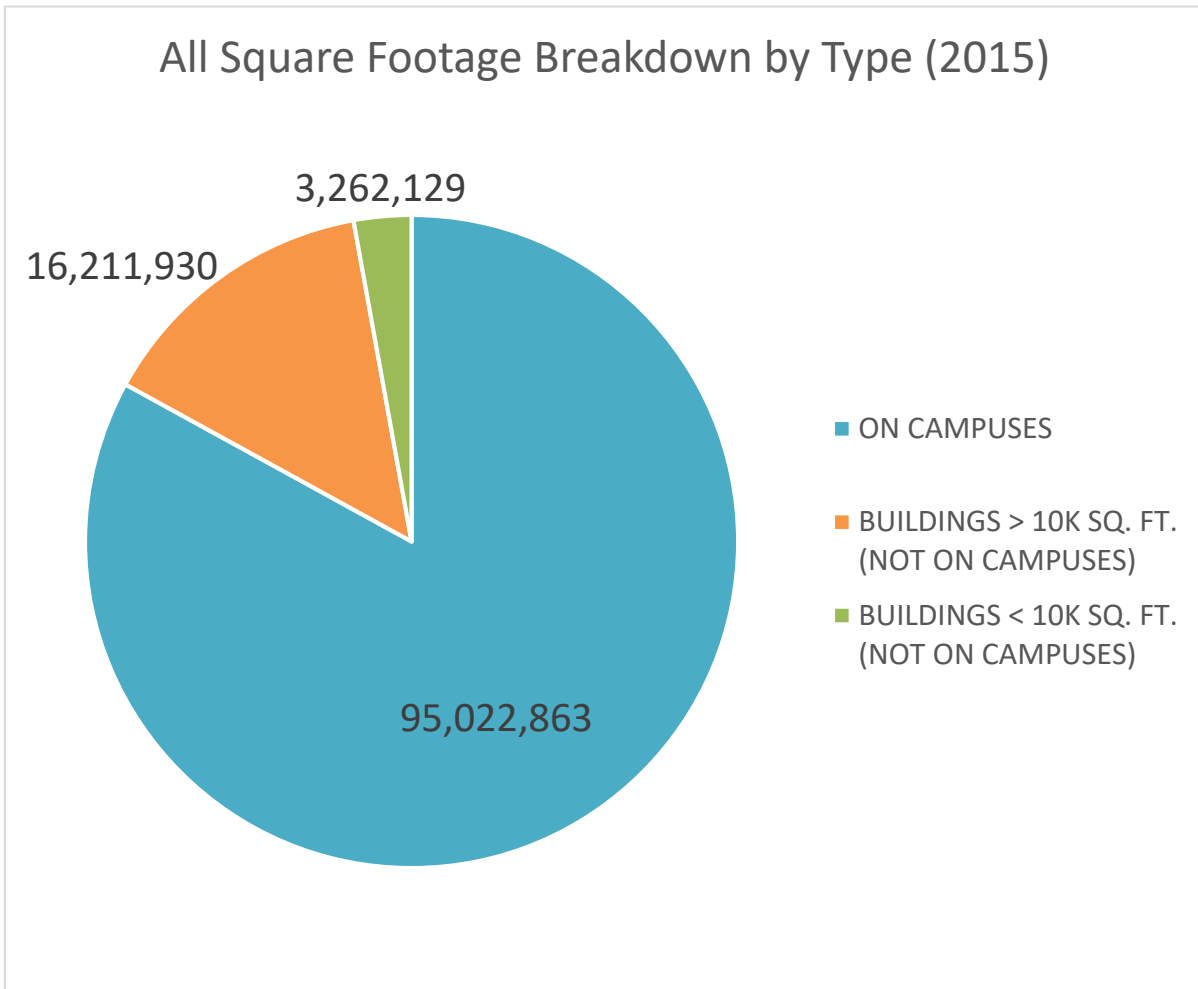

Figure 1 shows the vast majority of state government building square footage is located on campuses. Most large buildings on campuses are not separately metered. (This data is from 2015.)

Portfolio Manager Benchmarking Report
October 2016 through September 2018

Figure 2 - Agency, College and University Facilities (number of buildings).

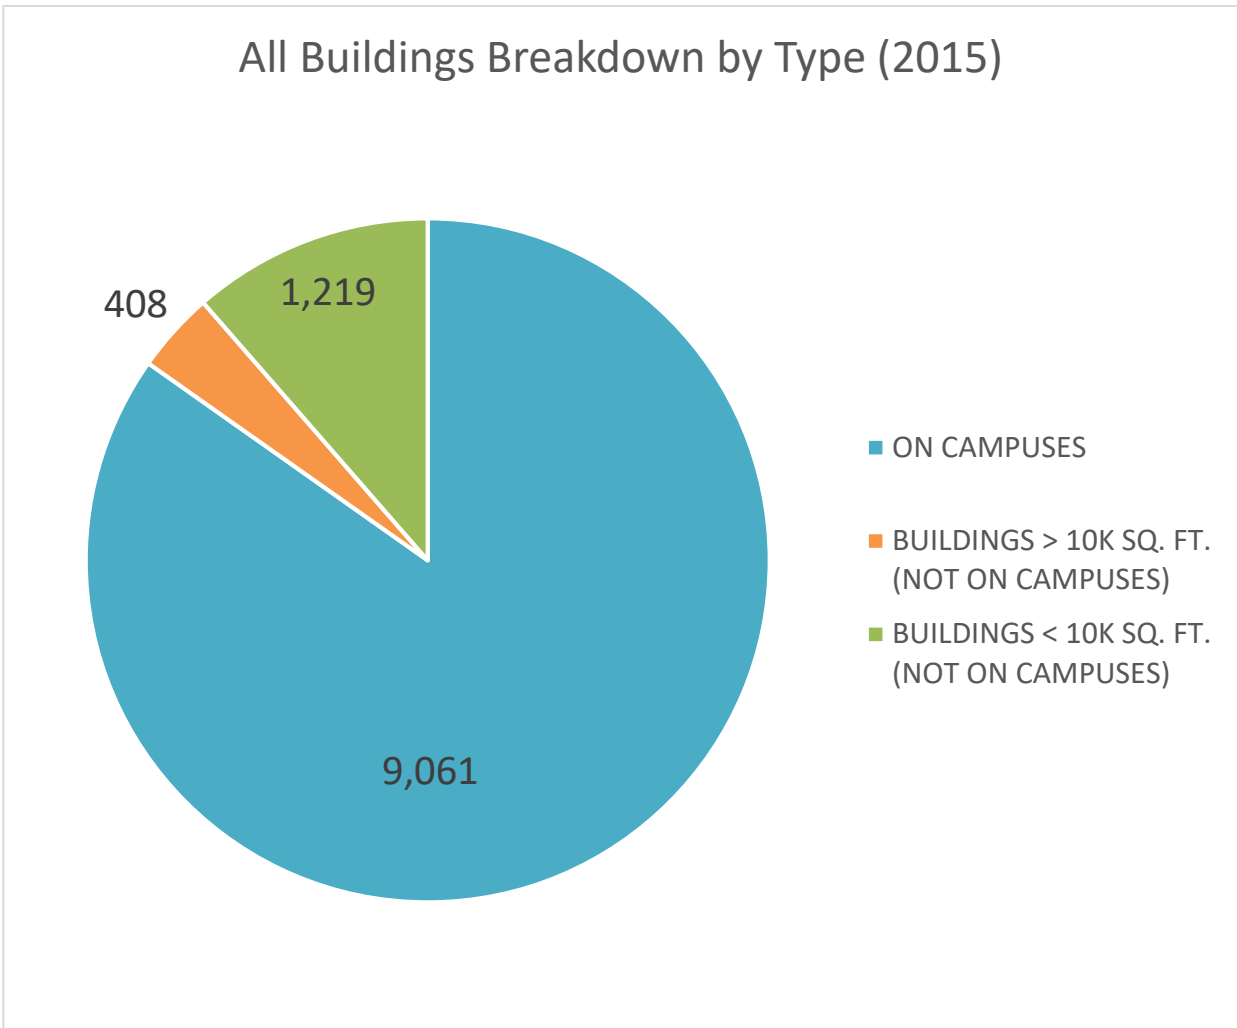

Figure 2 shows that the vast majority of state government buildings are located on campuses. Most large buildings on campuses are not separately metered. (This data is from 2015.)

Portfolio Manager Benchmarking Report

October 2016 through September 2018

Summary of Building Energy Benchmarking Status

Table 1 summarizes the benchmarking status of state agencies, colleges and universities. Data is for campuses and buildings with energy data shared with DES in Portfolio Manager in both 2014 and 2015. Both state owned and leased facilities which are required to be benchmarked are included. Previously benchmarked campuses and buildings for which energy data is not current in Portfolio Manager are not shown.

Table 1 - Agency, College and University Facilities Over 10,000 SF in Portfolio Manager (2015)

	2015 Energy Data Current (% of Sq ft)
Exec Agencies	55%
Other Agencies	Not evaluated
Colleges	30%
Universities	17%

Table 1 shows the percentage of whole campuses and large buildings not on campuses that were current in Portfolio Manager in 2015 (some of these campuses and buildings are no longer current in Portfolio Manager in 2017). Even on campuses that are benchmarked, the vast majority of large buildings on campuses are not benchmarked for energy use at the building level because they are not separately metered. For detail on the benchmarking status of large buildings which are located on a campus, see Appendix F.

PRELIMINARY AUDITS

DES recommended audits for buildings or campuses using more energy than the agency average. Preliminary audits were also recommended for agencies, colleges and universities that had not benchmarked. DES has urged agencies and colleges to do comprehensive preliminary audits that include all energy using systems in each building and all buildings on each campus.

Preliminary Audits Completed in Owned Buildings

In July 2011, DES identified 27 out of 34 colleges that either were not benchmarked or used more energy than average. For these 27, DES recommended energy audits. By July 2013, 23 out of the 27 colleges completed preliminary audits.

Agencies and universities also initiated preliminary audits. Due to data limitations, it was not possible to confirm that all facilities were audited.

Preliminary Audits Completed in Leased Buildings

DES has been incorporating preliminary audits and cost-effective energy savings ideas into the renewal process.

INVESTMENT GRADE AUDITS

Agencies or colleges that were using more energy than average in July 2011 were required to complete Investment Grade Audits by July 2013, subject to available funding. At that time, less than a quarter of agencies had completed audits. More than 80 percents of colleges had completed audits. About two-thirds of universities had completed some audits. Informal conversations with agency and college staff indicate most of the increased audit and retrofit activity was due to grants from the Department of Commerce.

BUILDING ENERGY RETROFITS

Agencies, colleges and universities did not pursue all cost effective energy conservation by the July 16, 2016 deadline in the Building Energy Benchmarking Law, possibly due to lack of available funding. Colleges implemented a substantial percentage of the cost effective energy conservation measures identified in audits. Agencies and universities implemented a smaller percentage. One agency, the Washington State Department of Ecology, implemented all cost effective energy conservation measures.

SUCCESS STORIES

Lake Washington Institute of Technology (LWIT) used meters and Resource Conversation Manager (RCM) services to save energy.

Lake Washington Institute of Technology manages two campuses totaling 483,000 square feet. Like most colleges, the buildings on their campuses were not separately metered. Starting in 2009, meters were added as bid alternates on several capital repair projects. In 2012-2014, LWIT used a DES Energy Savings Performance Contracting (ESPC) project to install the last major building meters. McKinstry was the Energy Services Contractor (ESCO). The project was enabled by a Washington State Department of Commerce grant. In addition to the meters, LED parking lot lighting was installed, and McKinstry provided a year of RCM support.

LWIT used an incentive from their utility, Puget Sound Energy, to extend the McKinstry RCM services. They focused on no- and low-cost energy conservation strategies like precise scheduling, temperature setpoints, cooling control improvements and plug load control. Total weather-adjusted savings reached a million kWh in the first year (12 percent), for a cost avoidance of over \$70,500. Total ROI on RCM services was 400 percent before utility incentives.

LWIT took the following steps to monitor and conserve energy:

- Incorporated metering and energy efficiency into capital projects
- Used Energy Saving Performance Contracting
- Pursued energy efficiency grants and incentives
- Sub-metered buildings to make energy consumption by building visible, and used that information to control energy use
- Benchmarked and kept buildings current in Portfolio Manager
- Used a resource conservation manager
- Made energy conservation an organizational priority

Quote from LWIT Facilities staff email:

"I will be honest with you in that we love the \$ savings but I feel most proud that we are using less coal to generate that electricity therefore our air is cleaner. Also we just saved someone's job. It's a passion with our department. Now we cannot guarantee those types of saving each year. Our goal is steady reduction while maintaining our savings aka hold the line at least."

Lake Washington Technical College point of contact for this report:

Tim Wheeler, Facilities Director

Portfolio Manager Benchmarking Report

October 2016 through September 2018

Department of Health (DOH) has reduced building energy use between 2016 and 2017:

Department of Health has been tracking actual energy use in their leased buildings and entering it into the Portfolio Manager. They have worked with building occupants and the building owner to reduce energy use.

Town Center 1, Tumwater

Electricity - 40 percent decrease

Natural Gas - 93 percent decrease

- New HVAC control system
- Moved the thermostats from exterior walls to interior wall to provide a more accurate reading
- HVAC occupancy sensors in select conference rooms, turn HVAC off when unoccupied
- Upgraded the controls for the exhaust system
- The HVAC air system was balanced
- All set points were set to: 70 degrees heating and 72 degrees cooling
- Replaced all lighting in restrooms to LED lights
- Replaced all stairwell lighting to LED lights
- Began appliance replacement project to replace all appliances (refrigerator and microwaves) to energy star rated equipment.

Town Center 2, Tumwater

Electricity - 18 percent decrease

Natural Gas - 71 percent decrease

- New HVAC control system
- Moved the thermostats from exterior walls to interior wall to provide a more accurate reading
- HVAC occupancy sensors in select conference rooms, turn HVAC off when unoccupied
- Upgraded the controls for the exhaust system
- The HVAC air system was balanced
- All set points were set to: 70 degrees heating and 72 degrees cooling
- Replaced all lighting in restrooms and stairwells to LED lights

Portfolio Manager Benchmarking Report
October 2016 through September 2018

Point Plaza East, Tumwater

Electricity - 6 percent decrease

Natural Gas - 56 percent decrease

- New HVAC control system
- Moved the thermostats from exterior walls to interior wall to provide a more accurate reading
- HVAC occupancy sensors in select conference rooms. The sensors communicate with the HVAC so that it turns off in those rooms when they are not being occupied
- Upgraded the controls for the exhaust system
- The HVAC air system was balanced
- All set points were set to: 70 degrees heating and 72 degrees cooling
- Replaced all lighting in restrooms and stairwells to LED lights
- Replaced all lighting in lobby to LED lights

Department of Ecology (ECY) has reduced building energy use between 2009 and 2017:

The Department of Ecology has been tracking actual energy use in their buildings and entering it into the Portfolio Manager. Lower energy use is a result of energy retrofit projects and energy conservation efforts over a period of years:

Building	Energy Use Intensity (EUI)									2017 Energy Star Score
	2009	2010	2011	2012	2013	2014	2015	2016	2017	
ECY Bellingham Field Office	46	34	37	36	41	56	44	39	42	No score
ECY Central Regional Office	70	89	73	55	51	48	--	39	52	91
ECY Eastern Regional Office	62	63	57	48	50	50	47	55	46	98
ECY Lacey HQ	68	63	66	56	54	54	56	48	51	95
ECY Northwest Regional Office	50	48	49	46	47	45	46	49	52	76
ECY Padilla Bay National Estuarine Research Reserve (several buildings)	--	--	50	43	42	40	38	--	--	N/A

 Gail Sandlin, Department of Ecology
 (360) 407-6860, gasa461@ecy.wa.gov

ISSUES AND CHALLENGES

The following issues and challenges have prevented the Benchmarking program from collecting complete and accurate results. They have been brought to our attention by facilities staff at agencies and colleges:

1. The lack of meters on state agency and college campuses has prevented benchmarking at the building level. This makes it difficult if not impossible for agency and college staff to effectively manage energy use.
2. Cuts to facilities staff have often left agencies and colleges without adequate staff to benchmark, track and control energy use.
3. Actively managing energy use and reducing greenhouse gas emissions are not a high priority of management at agencies and colleges.
4. Since the Portfolio Manager software is difficult for the casual user, there are errors and inconsistencies in the reported energy use data.
5. Automated benchmarking by commercial utilities is not always available in Washington. When it is available, it is not as user-friendly and reliable as it should be. Energy data is posted months after use. When energy use fails to display in Portfolio Manager, the customer must troubleshoot to find the reason and then call the utility to report errors such as gaps or overlaps in the data uploaded by the utility.
6. There is no established funding for making energy efficiency improvements to buildings leased by state agencies.

RECOMMENDATIONS

Incorporate building energy benchmarking into funding requirements – Agencies, colleges, and universities are not complying fully with the benchmarking law. Because of this, we do not know whether agency, college, and university building energy use is trending toward our greenhouse gas goals. Consider requiring current building benchmarking data in Portfolio Manager as a condition of capital funding.

Install energy meters on state buildings – Millions of square feet of state agency and college buildings are not separately metered. It's impossible to benchmark and track the energy use of a building that is not metered.

Expand the Resource Conservation Management (RCM) program – The RCM program helps facility managers reduce energy bills and make more cost effective maintenance and capital investment decisions. Provide funding to expand the RCM program to serve more agencies and colleges and school districts. Consider funding a specialized RCM position to provide building energy benchmarking assistance.

Ensure adequate staffing of facilities maintenance and operations – Facilities maintenance and operations must be adequately staffed and trained to keep occupancy schedules up to date, observe trends, troubleshoot problems, and adjust building systems to reduce energy use.

Fund Zero Energy Buildings and Zero Energy Renovations – Currently, new buildings and renovation projects are adding to the greenhouse gas emissions of agencies and colleges. New buildings that are capable of using less energy than they make should be prioritized. Renovations that dramatically reduce building energy use should also be considered and funded.

Build a modern work environment, to reduce greenhouse gas emissions – When possible, right-size facilities and reduce commutes by using strategies such as shared spaces, hoteling, distance learning, flexible work hours, and cloud computing as described in Executive Order 16-07 and on the OFM Modern Workplaces website.

Create a culture of conservation and sustainability –

- In many cases, energy conservation measures are not implemented, even though financial analysis shows that the energy savings can pay for the energy conservation measures over time.
- Decision makers consider cost effective energy retrofit proposals to be riskier than higher future operating costs.
- Higher future greenhouse gas emissions are not always considered.

Portfolio Manager Benchmarking Report

October 2016 through September 2018

- Facilities investments which produce long-term financial benefits or reduce organizational greenhouse gas emissions do not receive sufficient recognition.
- Major operational and facilities decisions are not driven by greenhouse gas reduction goals.

There are also thousands of energy-related decisions made every day by building occupants and agency staff. Possible no-cost or low-cost energy saving opportunities originate in these day-to-day decisions. Management support for energy savings efforts is essential. A culture of conservation and sustainability helps everyone find the best way to complete their mission while still striving for their energy reduction goals. Empowering everyone to make decisions that reduce energy use and greenhouse gas emissions is consistent with Lean principles.

Establish a cycle of continuous improvement – Completing all cost effective energy conservation measures is ongoing. As soon as five years after a comprehensive building energy retrofit is done, a new energy audit is likely to find additional cost effective energy saving measures. Changes in operations, degradation of equipment, new ideas and strategies, and new technology constantly create opportunities for reducing energy use. When state government has a focus on continuously implementing all cost effective energy conservation measures, we save money and reduce greenhouse gas emissions.

APPENDICES

Appendix A - Energy Benchmarking Law (RCW)

Qualifying public agency duties - Performance rating - Reports.

RCW 19.27A.190

- (1) The requirements of this section apply to the department of enterprise services and other qualifying state agencies only to the extent that specific appropriations are provided to those agencies referencing chapter 423, Laws of 2009 or chapter number and this section.
- (2) By July 1, 2010, each qualifying public agency shall:
 - (a) Create an energy benchmark for each reporting public facility using a portfolio manager;
 - (b) Report to the department of enterprise services, the environmental protection agency national energy performance rating for each reporting public facility included in the technical requirements for this rating; and
 - (c) Link all portfolio manager accounts to the state portfolio manager master account to facilitate public reporting.
- (3) By January 1, 2010, the department of enterprise services shall establish a state portfolio manager master account. The account must be designed to provide shared reporting for all reporting public facilities.
- (4) By July 1, 2010, the department of enterprise services shall select a standardized portfolio manager report for reporting public facilities. The department of enterprise services, in collaboration with the United States environmental protection agency, shall make the standard report of each reporting public facility available to the public through the portfolio manager web site.
- (5) The department of enterprise services shall prepare a biennial report summarizing the statewide portfolio manager master account reporting data. The first report must be completed by December 1, 2012. Subsequent reporting shall be completed every two years thereafter.
- (6) By July 1, 2010, the department of enterprise services shall develop a technical assistance program to facilitate the implementation of a preliminary audit and the investment grade energy audit. The department of enterprise services shall design the technical assistance program to utilize audit services provided by utilities or energy services contracting companies when possible.
- (7) For a reporting public facility that is leased by the state with a national energy performance rating score below seventy-five, a qualifying public agency may not enter into a new lease or lease renewal on or after January 1, 2010, unless:
 - (a) A preliminary audit has been conducted within the last two years; and
 - (b) The owner or lessor agrees to perform an investment grade audit and implement any cost-effective energy conservation measures within the first two years of the lease agreement if the preliminary audit has identified potential cost-effective energy conservation measures.

- (8)(a) Except as provided in (b) of this subsection, for each reporting public facility with a national energy performance rating score below fifty, the qualifying public agency, in consultation with the department of enterprise services, shall undertake a preliminary energy audit by July 1, 2011. If potential cost-effective energy savings are identified, an investment grade energy audit must be completed by July 1, 2013. Implementation of cost-effective energy conservation measures are required by July 1, 2016. For a major facility that is leased by a state agency, college, or university, energy audits and implementation of cost-effective energy conservation measures are required only for that portion of the facility that is leased by the state agency, college, or university.
- (b) A reporting public facility that is leased by the state is deemed in compliance with (a) of this subsection if the qualifying public agency has already complied with the requirements of subsection (7) of this section.
- (9) Schools are strongly encouraged to follow the provisions in subsections (2) through (8) of this section.
- (10) The director of the department of enterprise services, in consultation with the affected state agencies and the office of financial management, shall review the cost and delivery of agency programs to determine the viability of relocation when a facility leased by the state has a national energy performance rating score below fifty. The department of enterprise services shall establish a process to determine viability.
- (11) The department of enterprise services, in consultation with the office of financial management, shall develop a waiver process for the requirements in subsection (7) of this section. The director of the office of financial management, in consultation with the department of enterprise services, may waive the requirements in subsection (7) of this section if the director determines that compliance is not cost-effective or feasible. The director of the office of financial management shall consider the review conducted by the department of enterprise services on the viability of relocation as established in subsection (10) of this section, if applicable, prior to waiving the requirements in subsection (7) of this section.
- (12) By July 1, 2011, the department of enterprise services shall conduct a review of facilities not covered by the national energy performance rating. Based on this review, the department of enterprise services shall develop a portfolio of additional facilities that require preliminary energy audits. For these facilities, the qualifying public agency, in consultation with the department of enterprise services, shall undertake a preliminary energy audit by July 1, 2012. If potential cost-effective energy savings are identified, an investment grade energy audit must be completed by July 1, 2013.

RCW 19.27A.140

The definitions in this section apply to RCW [19.27A.130](#) through [19.27A.190](#) and [19.27A.020](#) unless the context clearly requires otherwise.

- (1) "Benchmark" means the energy used by a facility as recorded monthly for at least one year and the facility characteristics information inputs required for a portfolio manager.
- (2) "Conditioned space" means conditioned space, as defined in the Washington state energy code.
- (3) "Consumer-owned utility" includes a municipal electric utility formed under Title [35](#) RCW, a public utility district formed under Title [54](#) RCW, an irrigation district formed under chapter [87.03](#) RCW, a cooperative formed under chapter [23.86](#) RCW, a mutual corporation or association formed under chapter [24.06](#) RCW, a port district formed under Title [53](#) RCW, or a water-sewer district formed under Title [57](#) RCW, that is engaged in the business of distributing electricity to one or more retail electric customers in the state.
- (4) "Cost-effectiveness" means that a project or resource is forecast:
 - (a) To be reliable and available within the time it is needed; and
 - (b) To meet or reduce the power demand of the intended consumers at an estimated incremental system cost no greater than that of the least-cost similarly reliable and available alternative project or resource, or any combination thereof.
- (5) "Council" means the state building code council.
- (6) "Embodied energy" means the total amount of fossil fuel energy consumed to extract raw materials and to manufacture, assemble, transport, and install the materials in a building and the life-cycle cost benefits including the recyclability and energy efficiencies with respect to building materials, taking into account the total sum of current values for the costs of investment, capital, installation, operating, maintenance, and replacement as estimated for the lifetime of the product or project.
- (7) "Energy consumption data" means the monthly amount of energy consumed by a customer as recorded by the applicable energy meter for the most recent twelve-month period.
- (8) "Energy Service Company" has the same meaning as in RCW [43.19.670](#).
- (9) "Enterprise services" means the department of enterprise services.
- (10) "Greenhouse gas" and "greenhouse gases" includes carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.
- (11) "Investment grade energy audit" means an intensive engineering analysis of energy efficiency and management measures for the facility, net energy savings, and a cost-effectiveness determination.

- (12) "Investor-owned utility" means a corporation owned by investors that meets the definition of "corporation" as defined in RCW [80.04.010](#) and is engaged in distributing either electricity or natural gas, or both, to more than one retail electric customer in the state.
- (13) "Major facility" means any publicly owned or leased building, or a group of such buildings at a single site, having ten thousand square feet or more of conditioned floor space.
- (14) "National energy performance rating" means the score provided by the energy star program, to indicate the energy efficiency performance of the building compared to similar buildings in that climate as defined in the United States environmental protection agency "ENERGY STAR® Performance Ratings Technical Methodology."
- (15) "Net zero energy use" means a building with net energy consumption of zero over a typical year.
- (16) "Portfolio manager" means the United States environmental protection agency's energy star portfolio manager or an equivalent tool adopted by the department of enterprise services.
- (17) "Preliminary energy audit" means a quick evaluation by an energy service company of the energy savings potential of a building.
- (18) "Qualifying public agency" includes all state agencies, colleges, and universities.
- (19) "Qualifying utility" means a consumer-owned or investor-owned gas or electric utility that serves more than twenty-five thousand customers in the state of Washington.
- (20) "Reporting public facility" means any of the following:
- (a) A building or structure, or a group of buildings or structures at a single site, owned by a qualifying public agency, that exceed ten thousand square feet of conditioned space;
 - (b) Buildings, structures, or spaces leased by a qualifying public agency that exceeds ten thousand square feet of conditioned space, where the qualifying public agency purchases energy directly from the investor-owned or consumer-owned utility;
 - (c) A wastewater treatment facility owned by a qualifying public agency; or
 - (d) Other facilities selected by the qualifying public agency.
- (21) "State portfolio manager master account" means a portfolio manager account established to provide a single shared portfolio that includes reports for all the reporting public facilities.

RCW 19.27A.170

- (1) On and after January 1, 2010, qualifying utilities shall maintain records of the energy consumption data of all nonresidential and qualifying public agency buildings to which they provide service. This data must be maintained for at least the most recent twelve months in a format compatible for uploading to the United States environmental protection agency's energy star portfolio manager.
- (2) On and after January 1, 2010, upon the written authorization or secure electronic authorization of a nonresidential building owner or operator, a qualifying utility shall upload the energy consumption data for the accounts specified by the owner or operator for a building to the United States environmental protection agency's energy star portfolio manager in a form that does not disclose personally identifying information.
- (3) In carrying out the requirements of this section, a qualifying utility shall use any method for providing the specified data in order to maximize efficiency and minimize overall program cost. Qualifying utilities are encouraged to consult with the United States environmental protection agency and their customers in developing reasonable reporting options.
- (4) Disclosure of nonpublic nonresidential benchmarking data and ratings required under subsection (5) of this section will be phased in as follows:
 - (a) By January 1, 2011, for buildings greater than fifty thousand square feet; and
 - (b) By January 1, 2012, for buildings greater than ten thousand square feet.
- (5) Based on the size guidelines in subsection (4) of this section, a building owner or operator, or their agent, of a nonresidential building shall disclose the United States environmental protection agency's energy star portfolio manager benchmarking data and ratings to a prospective buyer, lessee, or lender for the most recent continuously occupied twelve-month period. A building owner or operator, or their agent, who delivers United States environmental protection agency's energy star portfolio manager benchmarking data and ratings to a prospective buyer, lessee, or lender is not required to provide additional information regarding energy consumption, and the information is deemed to be adequate to inform the prospective buyer, lessee, or lender regarding the United States environmental protection agency's energy star portfolio manager benchmarking data and ratings for the most recent twelve-month period for the building that is being sold, leased, financed, or refinanced.
- (6) Notwithstanding subsections (4) and (5) of this section, nothing in this section increases or decreases the duties, if any, of a building owner, operator, or their agent under this chapter or alters the duty of a seller, agent, or broker to disclose the existence of a material fact affecting the real property.

Energy Star Portfolio Manager

EPA's Portfolio Manager is a free web-based tool used to track and report on building energy use. Benchmarking in Portfolio Manager identifies opportunities for energy savings in buildings occupied by state government, colleges, municipalities and schools. The DES Energy Program provides resources and assistance to help our client's benchmark building energy use in the following ways:

- Reports on building energy benchmarking by Washington state agencies and colleges
- Resources that help our clients fund, install and manage metering and building energy tracking tools
- Portfolio Manager training and educational presentations
- Technical assistance by telephone and email

Appendix C - DES Audit Recommendations

(As posted on GA website in July 2011, with agency name changed to DES, and updated phones.)

DES Evaluation of Non-Rated Building Types

Many state agency and college buildings are not ENERGY STAR Portfolio Manager Rated Building Types. For instance, offices and warehouses are Rated Building Types, but college classroom buildings and prisons are not. RCW 19.27A.190 required Enterprise Services to evaluate non-rated building types by July 1, 2011, to determine which of these buildings need preliminary energy audits.

Site Energy Use Intensity (EUI)

Site Energy Use Intensity (EUI) will be used to identify buildings, which may benefit from an energy audit. The EUI is the annual energy use of each building per square foot. If the building is on a campus with shared utilities, and is not yet individually metered, the campus EUI will be used. The building or campus EUI may be compared to the average EUI in the State portfolio for that building or campus type, or the National Average Site Energy Use Intensity (EUI) of a similar building type in the EIA Commercial Buildings Energy Consumption Survey (CBECS). The National Average EUI is useful as a rough comparison, although buildings with unique energy demands may vary from the average.

Using Building Energy Performance Distributions to Find Savings Opportunities

The data collected by EPA to create Rated Building Types is useful for estimating the potential energy savings available in non-rated buildings. For example, buildings in the lowest-performing quartile use more than 35% more energy than the average building. A small number of worst performers use more than twice as much energy as the average. It is likely that non-rated building types have similar performance distributions. For this reason, buildings using more energy than the average make good candidates for preliminary energy audits.

Some building types use more energy. Food Service and Science Buildings are examples of energy intensive buildings. A high EUI does not mean the building is inefficient. However, the financial benefit of reducing the energy use of a science building by just 10% may be the same as reducing the energy use of an office building by 30%. 5-10% savings can often be found in no-cost or low-cost operational or controls adjustments. For this reason, all buildings with high EUI make good candidates for preliminary energy audits.

Based on the probable energy performance distribution of non-rated building types, and the greater financial benefit from small percentages of energy savings in buildings using more energy per square foot, preliminary audits are recommended for all non-rated buildings using more energy than the average of comparable buildings.

Colleges -- Half of the community and technical college campuses reporting in the State portfolio have EUI under 80. Campuses using less than 80 kBtu/sf-yr routinely benefit from DES Energy audits that produce cost effective energy conservation measures. Comprehensive preliminary audits are recommended for community and technical college campuses with campus average EUI greater than 80.

Universities – Comprehensive preliminary audits are recommended for university campuses with campus average EUI greater than 120 (all universities are already conducting audits).

Large Agencies -- DES recommends that agencies with large numbers of buildings, such as DOT, DOC and DSHS, initiate comprehensive preliminary audits of campuses, which use more energy than the average campus in that agency.

Small Agencies -- Agencies with small numbers of buildings will not have enough data to find averages. Preliminary audits are recommended for non-rated building types over 10,000 gsf with EUI greater than 80.

When all state agency and college buildings are individually metered and benchmarked, the building energy use data may be specific enough to identify buildings with lower EUI that would benefit from energy audits. For instance, colleges can compare classroom buildings or gymnasiums across the state portfolio, taking into account differences such as hours of use. At this time, there are not enough state agency and college buildings separately metered and benchmarked to allow this level of analysis.

List of Recommended Preliminary Audits, To Be Completed by July 1, 2012

For all agency or college buildings not benchmarked in Portfolio Manager by July 1, 2011, a preliminary audit is recommended, to be initiated by November 1, 2011 to allow collection of energy data during the winter heating season. The Energy Services Company (ESCO) performing the preliminary audit will put facilities into Portfolio Manager (will benchmark buildings) for the agency or college for a nominal fee. Buildings or campuses will be taken off the list recommending an audit if benchmarking shows they use less than the average EUI as described above and in the table below, and if the preliminary audit found no cost effective energy conservation measures.

The benchmarked status of all agency and college buildings as of July 1, 2012 will be reported to the legislature in a report on December 1, 2012.

If your agency or college is on the list of recommended preliminary audits, please request an audit from DES Energy, or follow the DES ESPC Guidelines to procure the audit from an Energy Services Company. You may request to be taken off the list if a comprehensive audit was done within the last 5 years, and all cost effective measures implemented.

Recommended Preliminary Audits for College and Universities

Recommended Preliminary Audits for State Agencies

For more information contact:

Department of Enterprise Services Energy Program

Donna K. Albert, PE, MCE, CEM, LEED-AP

Office Phone: (360) 489-2420

E-mail: donna.albert@des.wa.gov

Recommended Preliminary Audits for State Agencies

1. Building uses unique to agencies like DSHS or DOT may not fit Commercial Building Energy Consumption Survey (CBECS) categories neatly. Agencies will benefit from comparing energy use of similar facilities within the agency.
2. Preliminary audits are recommended for buildings greater than 10,000 gsf that use more energy per square foot than the average agency building.
3. Large buildings with high Energy Use Intensity (EUI) have the greatest opportunity for savings because even small percentages of improvement can create substantial savings.
4. Campuses are good candidates for audits even if the campus average is not high. It is probable that some buildings on the campus use energy well above the average.
5. By metering each building and tracking energy use over time, agencies can continuously improve performance.
6. Preliminary audits are recommended for all buildings or campuses not benchmarked in Portfolio Manager, although it would be preferable to find the best candidates by benchmarking before starting audits.

Agencies for which no audits are recommended

Based on the available data, no preliminary audits were recommended for the following agencies:

- Agriculture, Department of
- Commerce
- Ecology, Department of
- Financial Institutions, Department of
- Financial Management, Department of
- Health, Department of
- Health Care Authority
- Historical Society
- Lottery
- Parks Commission
- Personnel, Department of
- Utilities and Transportation Commission

Agencies not benchmarked, or partially benchmarked

Based on the available data, the following agencies are not benchmarked or are in the process of benchmarking. There is insufficient information to determine which facilities in these agencies need audits:

- Enterprise Services, Department of
- Information Services, Department of
- Licensing, Department of
- Liquor Control Board
- Military Department (*WSU Extension Energy is providing assistance*)
- Natural Resources, Department of (*DNR has requested assistance from WSU Extension Energy*)

For all agency buildings not benchmarked in Portfolio Manager by July 1, 2011, a comprehensive preliminary audit is recommended, to be initiated by November 1, 2011 to allow collection of energy data during the winter heating season. The Energy Services Company (ESCO) performing the preliminary audit will benchmark the facilities for the agency or college for a nominal fee. Buildings or campuses will be taken off the list recommending an audit if benchmarking shows they use less than the average EUI as described above and in the table below, and if the preliminary audit found no cost effective energy conservation measures. The benchmarked status of all agency and college buildings as of July 1, 2012 will be reported to the legislature in a report on December 1, 2012.

Agencies for which preliminary audits are recommended

Based on the available data, preliminary audits were recommended for the following agencies:

- **Corrections, Department of** (*WSU Extension Energy has benchmarked facilities and shared with DES. DES is reviewing. Comprehensive audits will be recommended for facilities with higher than average for similar DOC facilities. DOC is already working with an ESCO.*)
- **Transportation, Department of** (*DOT has benchmarked most buildings, and is doing quality control on data. DES will work with DOT to recommend audits of buildings having higher than average energy use for similar DOT facilities. DOT is already working with an ESCO.*)
- **Employment Security, Department of**
Preliminary audits are recommended for buildings greater than 10,000 gsf that use more energy per square foot than the average ESD building (EUI of 80), and for which ESD is billed directly for utilities. For building uses unique to ESD that do not fit the office category, ESD will benefit from comparing energy use of similar facilities within the agency.
- **Fish and Wildlife, Department of**
A preliminary audit is recommended for WDFW Region 4 Office, which is a Rated Building Type with a rating of less than 50.
- **Labor and Industries, Department of**
Preliminary audits are recommended for buildings greater than 10,000 gsf that use more energy per square foot than the average L&I building (EUI of 60). Building uses unique to L&I may not fit the office category. L&I will benefit from comparing energy use of similar facilities within the agency.
- **Patrol, State**
Preliminary audits are recommended for buildings greater than 10,000 gsf that use more energy per square foot than the average WSP building (EUI of 111). The labs and Maryville campus were excluded from the average EUI calculation. Building uses unique to WSP may not neatly fit rated building types or CBECS categories. WSP will benefit from comparing energy use of similar facilities within the agency.
- **Revenue, Department of**
A preliminary audit is recommended for DOR 6300 Linderson Bldg, which is a Rated Building Type with a rating of less than 50.

- **Social and Health Services, Department of**

Preliminary audits are recommended for buildings greater than 10,000 gsf that use more energy per square foot than the average DSHS building (EUI of 116). Building uses unique to DSHS may not neatly fit rated building types or CBECS categories. DSHS will benefit from comparing energy use of similar facilities within the agency. This recommendation to DSHS is based on available data, which may not be complete.

For more information contact:

Department of Enterprise Services Energy Program

Donna K. Albert, PE, MCE, CEM, LEED-AP

Office Phone: (360) 489-2420

E-mail: donna.albert@des.wa.gov

Recommended Audits for Colleges and Universities

1. Large buildings with high Energy Use Intensity (EUI) have the greatest opportunity for savings because even small percentages of improvement can create substantial savings.
2. Campuses are good candidates for audits even if the campus average is not high. It is probable that some buildings on the campus use energy well above the average.
3. By metering each building and tracking energy use over time, colleges and universities can continuously improve performance.
4. Preliminary audits are recommended for all buildings or campuses not benchmarked in Portfolio Manager, although it would be preferable to find the best candidates by benchmarking before starting audits.

Recommendations for Colleges

Comprehensive preliminary energy audits of all campus buildings are recommended for college campuses having an EUI greater than 80. Many colleges are already doing audits.

Benchmarked College Energy Use	EUI
Highline Community College	144
Community Colleges of Spokane	103
Tacoma Community College	94
Skagit Valley College	87
Columbia Basin College Total	83
Cascadia Community College	77
Bates Technical College	73
Yakima Valley Community College	66
Lake Washington Technical College	58
Grays Harbor College	52

Average campus EUI (highest and lowest values disregarded) 80

National Average from CBECS database 120

Colleges for which no audits are recommended

Based on the available data, no preliminary audits were recommended for the following colleges:

- Bates Technical College
- Cascadia Community College
- Yakima Valley Community College
- Lake Washington Technical College
- Grays Harbor College

Colleges for which preliminary audits are recommended

Based on the available data, preliminary audits are recommended for the following colleges:

- Columbia Basin College
- Community Colleges of Spokane
- Highline Community College
- Skagit Valley College
- Tacoma Community College

Colleges not benchmarked, or partially benchmarked

Based on the available data, the following colleges are not benchmarked or are in the process of benchmarking. There is insufficient information to determine which facilities need audits. Most of these colleges are working with WSU Energy or an ESCO, and are benchmarking.

- Bellevue College (*BCC is moving energy data from Utility Manager into Portfolio Manager*)
- Bellingham Technical College (*BTC energy data is in Portfolio Manager, not yet shared with DES*)
- Big Bend Community College (*requested assistance, working with WSU Extension Energy*)
- Centralia College (*requested assistance, working with WSU Extension Energy*)
- Clark College (*in the process of benchmarking*)
- Clover Park Technical College (*requested assistance, working with WSU Extension Energy*)
- Edmonds Community College (*campus submetered, first full year of energy data not yet available*)
- Everett Community College (*ECC moved energy data from Utility Manager into Portfolio Manager, and is doing a quality control review*)
- Green River Community College (*GRCC is moving energy data from Utility Manager into Portfolio Manager*)
- Lower Columbia College (*requested assistance from WSU Extension Energy*)
- North Seattle Community College (*requested assistance, working with WSU Extension Energy*)
- Olympic College (*campus submetered, first full year of energy data not yet available*)
- Peninsula College (*requested assistance, working with WSU Extension Energy*)
- Pierce College (*requested assistance, working with WSU Extension Energy*)
- Renton Technical College (*requested assistance, working with WSU Extension Energy*)
- Seattle Central Community College (*requested assistance, working with WSU Extension Energy*)
- Shoreline Community College (*requested assistance, working with WSU Extension Energy*)
- South Puget Sound Community College (*requested assistance, working with WSU Extension Energy, shared data is being reviewed*)
- South Seattle Community College
- Walla Walla Community College
- Wenatchee Valley College (*facilities entered into Portfolio Manager, but not yet shared with DES*)
- Whatcom Community College (*WCC is using Utility Manager, but has not yet entered facilities into Portfolio Manager or shared with DES*)

For all above college campuses not benchmarked in Portfolio Manager by July 1, 2011, a comprehensive preliminary audit is recommended, to be initiated by November 1, 2011 to allow collection of energy data during the winter heating season. The Energy Services Company (ESCO) performing the preliminary audit will benchmark the facilities for the agency or college for a nominal fee. Buildings or campuses will be taken off the list recommending an audit if benchmarking shows they have less than the average EUI as described above and in the table below, and if the comprehensive preliminary audit found no cost effective energy conservation measures. The benchmarked status of all agency and college buildings as of July 1, 2012 will be reported to the legislature in a report on December 1, 2012.

Recommendations for Universities

All of the universities are already doing energy audits and energy retrofits. DES Energy recommends universities set progressively lower EUI goals for existing buildings and use comprehensive audits to pursue them. See table below:

Benchmarked University Energy Use	EUI
Eastern Washington University	123
The Evergreen State College	95
University of Washington	183
*Washington State University (WSUS only)	96
Western Washington University	110
Average of available data	121
National average from CBECS database	120

*Washington State University benchmarking is available only for the WSUS campus.

Central Washington University has put buildings into Portfolio Manager. (There is a technical problem with getting CWU energy data to show.)

For more information contact: Donna K. Albert, Office Phone: (360) 489-2420

Appendix D - DES Energy Savings Performance Contracting Program

Energy Saving Performance Contracting (ESPC) is a method of identifying, implementing and financing energy and utility efficiency projects. By leveraging utility savings along with grants and capital dollars, projects can typically be funded within existing budgets. ESPC is a partnership between the client agency, the Energy Service Company (ESCO), and the Department of Enterprise Services (DES) Energy Program.

Client Agencies receive guaranteed construction costs, guaranteed energy savings, and guaranteed equipment performance. The ESCO and the DES Energy Program team up with the utilities to maximize the available utility incentives. The ESCO can also provide Building Benchmarking assistance, and energy and carbon reduction goal assistance. The DES Energy Program provides the customer with energy engineering oversight and contract management services.

APPENDIX E – Site Energy Use Intensity (EUI) 2009 – 2017

E.1 Campuses over 10,000 sf

E.2 Buildings over 10,000 sf

Note: This energy data is self-reported by agencies and colleges. In some cases, energy data is obviously incomplete, because the Energy Use Intensity (EUI) is too low for an occupied office or college classroom building. The quality of Portfolio Manager data will continue to improve as agencies and colleges use it to track progress toward energy reduction goals.

APPENDIX F – Benchmarking Status of Campuses and Buildings

F.1 Campuses over 10,000 sf

F.2 Buildings over 10,000 sf

Note: This energy data is self-reported by agencies and colleges. In some cases, energy data is obviously incomplete, because the Energy Use Intensity (EUI) is too low for an occupied office or college classroom building. The quality of Portfolio Manager data will continue to improve as agencies and colleges use it to track progress toward energy reduction goals.
